

## Overall Timeline

| Phase                             | Duration                      | Key Outcome              |
|-----------------------------------|-------------------------------|--------------------------|
| Presentation 1                    | Mid-Feb (before mid-semester) | Concept + design clarity |
| Presentation 2                    | Mid-Late March                | Implementation progress  |
| Final Presentation and Submission | Late April (near finals)      | Completed project        |

## Presentation 1 — Project Concept & Design Review

**Target window:** 12-18 Feb (Before Mid-Sem)

**Objective:** "Do you understand the problem and blockchain fundamentals?"

### Expected Focus:

- Project feasibility
- Clear problem definition
- Sound design thinking

### Suggested Outline (Presentation 1)

1. Project Title & Team Members
2. Project Goal / Problem Statement
3. Motivation & Relevance of Blockchain
4. Stakeholders and Role of Smart Contracts
5. High-level System Architecture (UML preferred)
6. Logical Design
  - Flowcharts / Algorithms / Diagrams
7. Proposed Blockchain Structure
8. Technologies Planned
9. Expected Outcome

## Presentation 2 — Implementation Progress Review

Target window: 20-25 March

Objective: *"Are you creating something real?"*

### Expected Focus:

- Implementation progress
- Technical correctness
- Early results

### Suggested Outline (Presentation 2)

1. Brief Recap of Project Goal
2. Finalized Architecture
3. Logical Design (refined)
4. Blockchain Structure (implemented)
5. Smart Contracts Developed
6. Technology Stack Used
7. Code Overview & Partial Results
8. Test Results / Sample Inputs & Outputs
9. Challenges Faced

## Presentation 3 — Final Project Presentation

Late April (Near Final Exams)

Objective: *"Deliver, defend, demonstrate."*

### Final Presentation Outline

1. Project Title with Team Members
2. Project Goal / Statement
3. Stakeholders and Smart Contracts
4. System Architecture (UML)
5. Logical Design
  - Models, Flowcharts, Algorithms
6. Blockchain Structure
7. Databases (if any)
8. Technology Used
9. Programs / Smart Contracts Developed
10. Test Results
11. Live Demonstration
  - Smart contract execution
  - Blockchain internals (blocks, transactions)
12. Conclusion
13. References

# Final Project Report Outline

## 1. Project Title Page

- Project Title
- Team members (names + enrollment numbers)
- University & School
- Email IDs

## 2. Abstract (≤ 100 words)

## 3. Introduction

- Problem overview
- Objectives
- Relevance

## 4. Literature Survey

- Related blockchain concepts and platforms

## 5. Project Design

### 5.1 Architecture

- UML / Standard diagrams

### 5.2 Logical Design

- Sequence diagrams
- Activity diagrams
- Flowcharts / Algorithms / Pseudocode

### 5.3 Smart Contracts & Stakeholders

### 5.4 Blockchain Structure

### 5.5 Database Schema (if applicable)

## 6. Implementation

- Platform used (Ethereum / Hyperledger / etc.)
- Code details
- Deployment results
- Smart contract execution outputs

## 7. Conclusion

## 8. Future Directions

## 9. Acknowledgement

## 10. References

# Final Submission Instructions

- Single ZIP/RAR submission per group
- Naming format: **ProjectID\_CSE542.zip**
- Must include:
  - Presentation file
  - Report (PDF)
  - Source code
  - Additional material (if any)
